

Types Data :

→ Quantitative data -> numerical → count / measurable / values

-> **Discrete data (whole number) / cannot broken into decimal parts->**

eg : number of students

→ **Continuous data (range) → can be divided into smaller units of fractions → eg**
: age ,height, tem , wt.

→ **Qualitative data → categorical (descriptive data) -> distinct**

-> **nominal data → eg: gender , hair color**

→ **Ordinal data (ranking) -> feedback ,education levels**

Types Data : based on its structure

- 1) **Structured data : rows and columns (tabular data) (saved in : excel, database, powerbi, etc)**
- 2) **Unstructured data : no fixed format eg: email , voice msg, video -> NLP**
- 3) **Semi -structured data : tag/ metadata eg : json , XML**

**N.B : data types : string(Anu) , int(10), char(A), date(15/11/2025) , float, double, year,
time, bool, binary**
